

Learn how to install and establish trust for Enterprise apps on iPhone.

Employee Mitra, New Connection and Renewable Energy apps for iPhone are available on Employee Portal.

- Installing Employee Mitra App on iPhone.

1. Open Employee Portal in Safari browser of your iPhone Device, then click on the link provided to download MSEDCL Mobile Applications.

Employee Portal url - <https://empportal.mahadiscom.in/EmpPortal/emp>

2. Below Screen will appear. Click on App store and Install the App.

3. This will prompt you to install the app. Select "Install."

4. On the home screen, you should now see the app icon indicating that the app is installing.

Once the app install finishes, launch the app.

If you have iOS 18 or newer, you will see the message below.

Dismiss this message; to run app smoothly on your iPhone, you have to establish trust for the app developer.

5. Navigate to the **Settings** on your device and "**Tap Settings > General > VPN & Device Management**".

6. In "VPN & Device Management", you see a profile for the developer under the "ENTERPRISE APP" heading which is Not Trusted.

7. Tap the name of the developer profile under the Enterprise App heading to establish trust for this developer.

8. Tap Trust "[developer name]" to continue. In iOS 18 and later Versions, tap "Allow & Restart" to proceed with establishing trust. In earlier software versions, tap Trust to establish trust.

9. After your device restarts, follow the onscreen instructions to complete the process and trust the developer.

You must be connected to the Internet to verify the app developer's certificate when establishing trust. If you're behind a firewall, make sure that it's configured to allow connections to <https://ppq.apple.com>. If you aren't connected to the Internet when you trust an app, the device displays "Not Verified" instead. To use the app, connect to the Internet and tap the Verify App button.

After you verify an app for the first time, your iPhone touch must re-verify the app developer's certificate periodically to maintain trust. If you can't re-verify, you may see a message that verification will expire soon. To maintain trust, connect your device to the Internet, then tap the Verify App button or launch the app.

Follow above mentioned steps for installing New Connection and Renewable Energy iOS apps on iPhone.
